**Online Safety and Compliance
Electronic Reporting System**

The O.S.C.E.R. System
(www.oscersystem.com)

B E C A U S E R E S U L T S C O U N T

History – Why OSCER?

- In February 2000, a Ryder client asked us for help with their 850 locations:
 - Didn't know number of active drivers
 - Didn't know compliance status
 - Couldn't track safety or regulatory compliance results

History – Why OSCER?

- Every location was “doing their own thing” (no uniformity)
- Could only review files by traveling to each physical location or mailing files
- They had several information networks, but none “talked to each other”
- DOT had visited and they were in need of a “system” for maintaining compliance

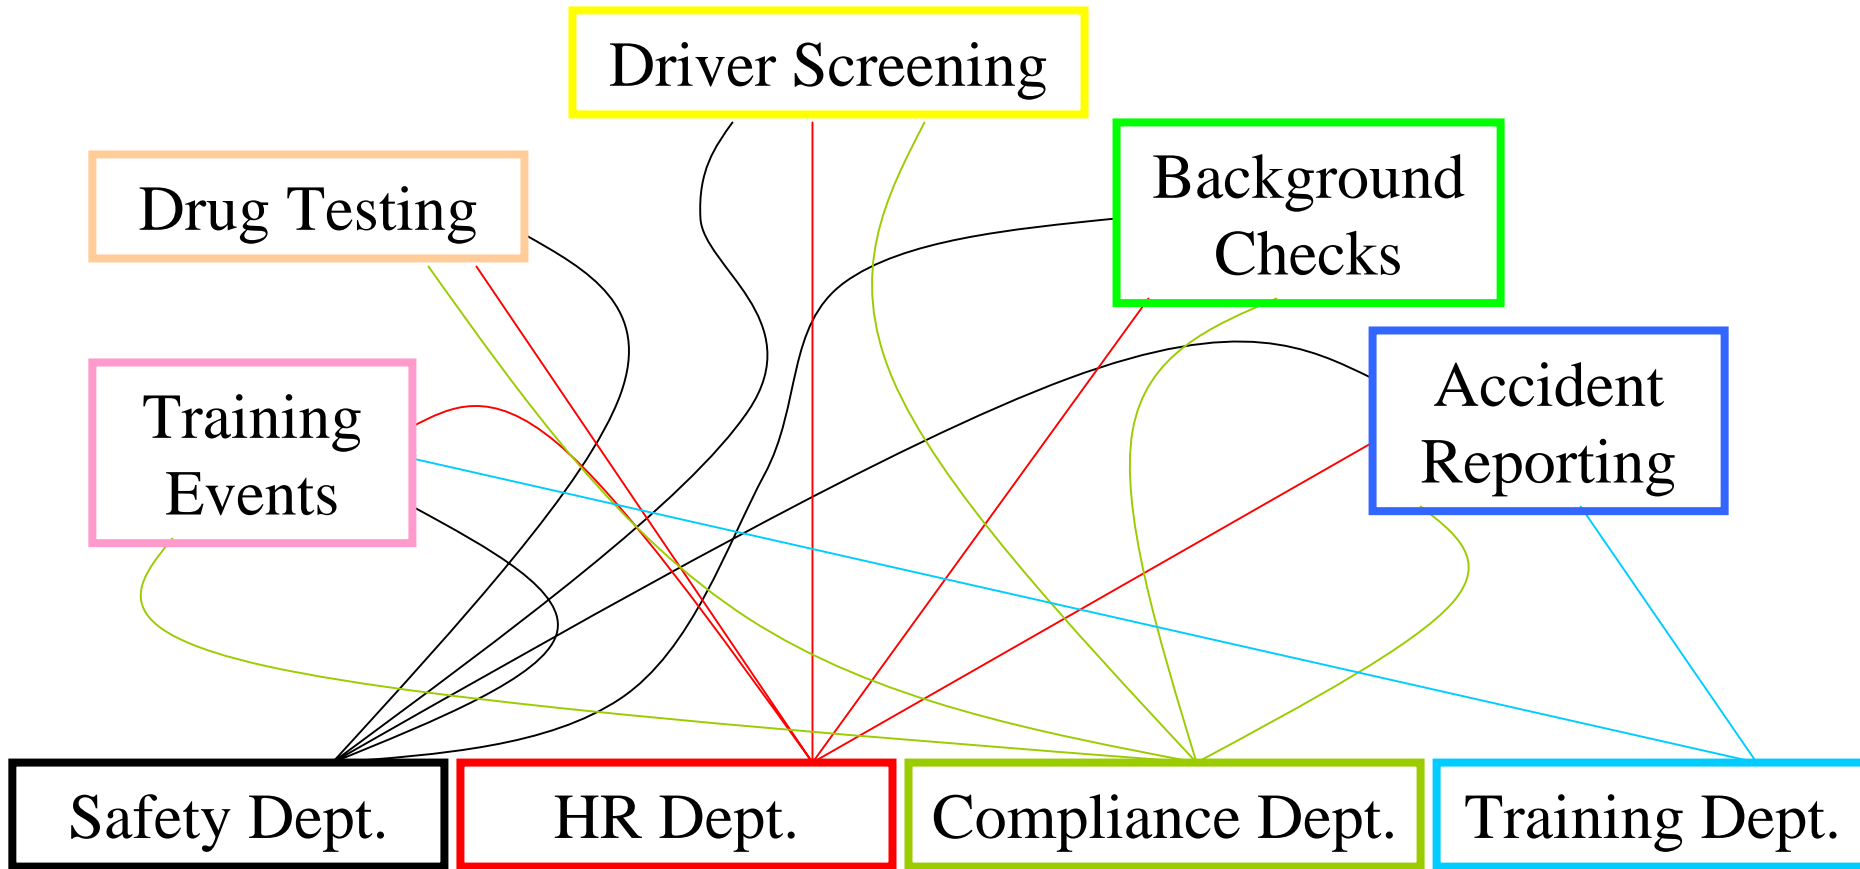

So we set out to build a system...

The OSCER System

- A Web Based Application designed to:
 - Manage driver/employee data
 - “Events”, Training summary, Qualifications
 - Diary and report on key expiration dates
 - Facilitate self-audits of D.O.T. compliance
 - Maintain driver qualification stats
 - Streamline accident record keeping
 - Manage tractor details (esp. Owner Operators)

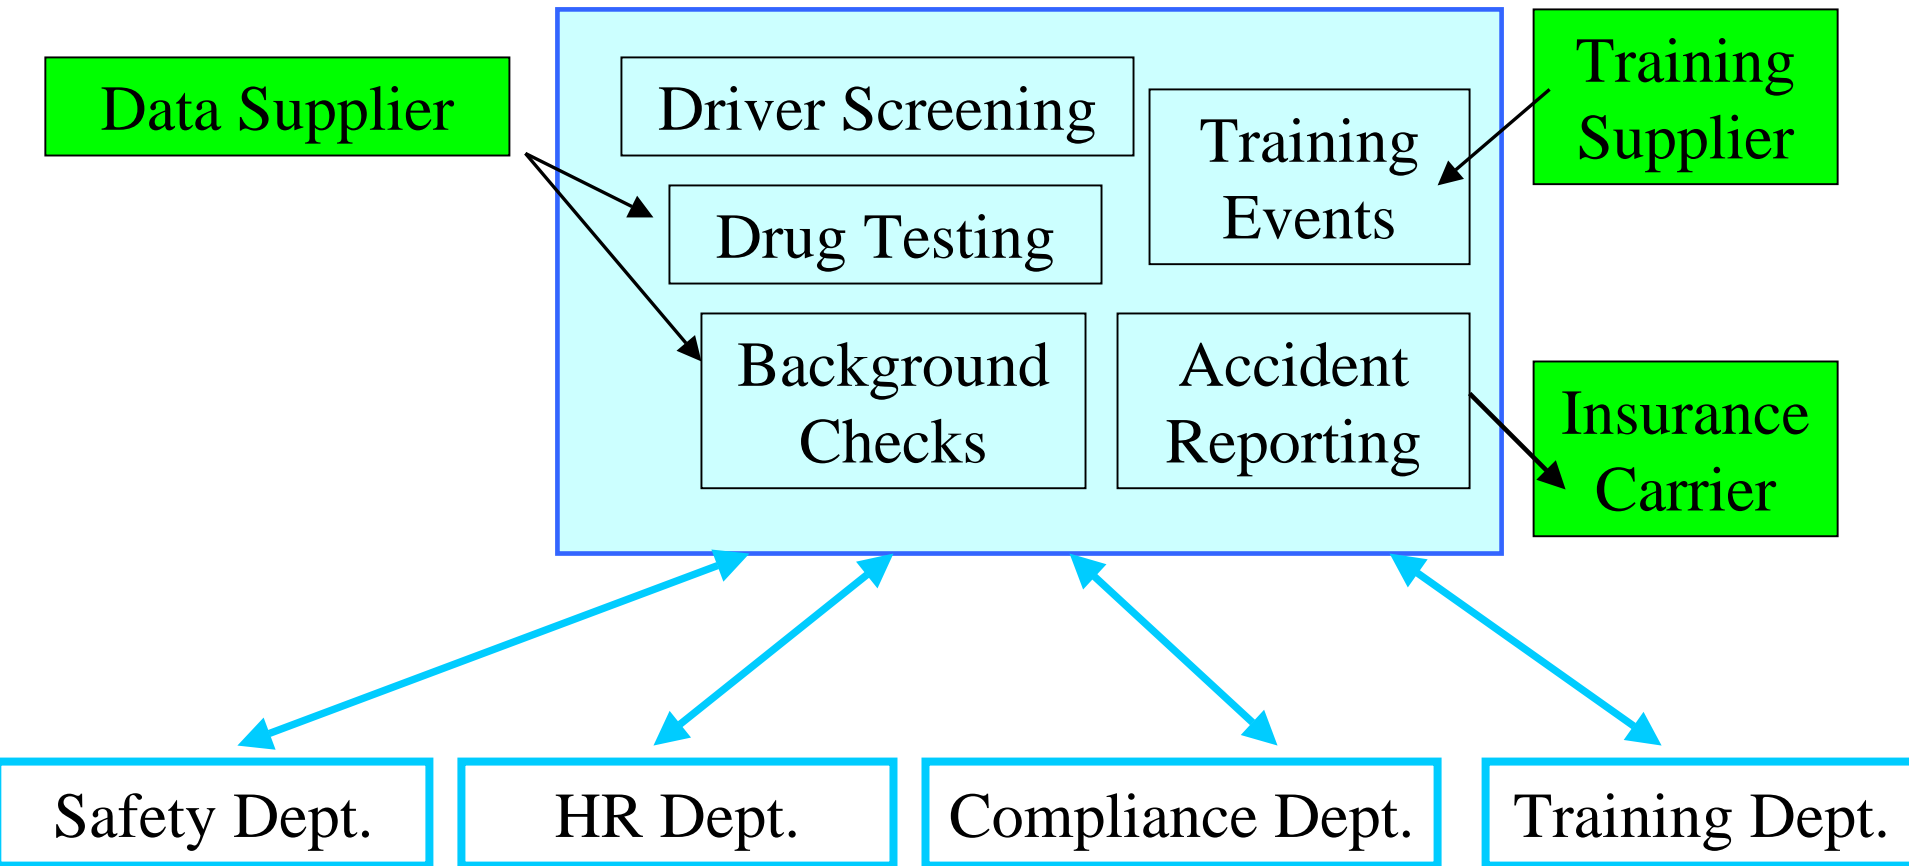

A warehouse for safety and regulatory issues

The “Typical” System

Duplication of administration, harder to get reports

The OSCER System – Integrated

Put it all in one place, avoid overlap

Key Features

- The system sends impending anniversary dates and pushes “To Do” lists via email to the responsible location manager
- If the issue is not addressed in a timely fashion, a reminder notice will escalate to a higher level of management!

Key Features

- OSCER replaces several individual software packages and can import data from current spreadsheets or programs

Initial set up can be measured in minutes

Key Features

- OSCERs forms, fields, reports were developed by client input – real world needs and real world work metrics
- Customers like:
 - American Red Cross
 - Roadlink USA
 - Terminix

Key Features

- Any recent/current web browser can access the web site - hardware does not matter
- Automatic, instant upgrades and system maintenance performed by our staff without having to deal with diskettes or multiple versions running on multiple machines
- Does not require the installation or expansion of a client-server network

Key Features

- Can interface with existing HR systems
 - Single point of entry for new hires (basic data)
- Can interface with vendors who supply data to your firm
 - you are not locked into a relationship with a specific provider of background checks, etc.
 - Be aware that some firms will try to lock you into a relationship with a specific provider

A Quick Tour

- You can check out O.S.C.E.R. live at:
 - www.oscersystem.com 
 - Enter “demo” as ID and as Password
- The next few slides cover some of the data that we currently capture, and an overview of the reports OSCER can provide

Driver Record - Data

- OSCER captures:
 - Type of driver (employee/contractor)
 - Status (active, quit, terminated)
 - Driver's qualifications (endorsements, part 391 checklist, medical restrictions)
 - Anniversary dates (medical, annual review, license expiration, training certifications)
 - Date hired, departed, reason for leaving, re-hire indicator, insurance, etc.

Driver Record – DQF Checklist

- Driver Qualification File checklist tied to each driver record
 - Forty-nine items that need to be verified in each DQF – per Part 391
 - You have the ability to upload scanned images of key documents, and then view or print copies on demand
 - Management reports available to identify drivers with missing check marks

Driver Record - Events

- Event = Noteworthy situation with a driver
- A few of the OSCER event categories are:
 - Training course completed
 - Moving Violations
 - Roadside Inspection (OOS)
 - Accidents
 - Safety Awards
 - Company violations (log issues, etc.)

Driver Events - Accidents

- Accident events can include insurance company reporting via email
- Use OSCER to generate accident register
- Build a customized “Safety Profile Report” to see who is costing your company the most from accidents, tickets, & violations.

Vehicle Record

- O.S.C.E.R. tracks physical assets, too:
 - Lease/Contract expiration date
 - FHWA/CVSA Inspection dates
 - Plate state, number, expiration
 - VIN, Make, Model, Year
 - Class (1-8)
 - Tire size
 - Location assigned

We also track permit expirations

Reporting

- The OSCER System provides meaningful management reports (including):
 - Accident Register (DOT only v. All Accidents)
 - **List active employees and/or independent contractors**
 - List drivers with missing checklist items
 - Accident analysis by type, driver, age, tenure...
 - Asset value reports
 - Tenure/Turnover analysis

We also provide data downloads for ad-hoc reporting

Reporting

- OSCER is the ONLY commercial system with a UIIA interface for their Intermodal Driver Database (IDD)

The IDD validates drivers for interchange of equipment at ramps and ports.

OSCER Summary

- Easy to use, internet based
- OSCER has the most experience (4yrs.)
- OSCER was designed to handle both company drivers and contractors
- Free, No Obligation Trial
- No hidden fees – no nickel & dime antics

Allows you to focus on managing,
not administration of records

Thanks for Your Time!
